

What is Signfix 9?

Following the huge success of our signfix 8 transparent structural adhesive we have developed an additional grade to handle the growing demand for this technology.

Whilst maintaining all of the functional characteristics of the Signfix 8, this new grade offers a high build bond-line, extended open-time, and a gap fill ability of up to 5mm.

Both grades share the revolutionary liquid composite chemistry and work together to provide a complete bonding solution for the most aesthetically demanding of applications.

How do I use Signfix 9?

Signfix 9 is a two part system that when mixed offers a gel time of 15 minutes, and full handling strength within 30 minutes.

Due to the grades high viscosity it can build a fillet along a joint, or be easily applied on uneven and vertical surfaces.

The advanced chemistry within Signfix 9 offers a controlled and complete cure throughout the volume of the adhesive, and has a dry to touch tack free surface if allowed to cure outside of the bondline.

Where can I buy Signfix 9?

Signfix 9 has been developed and formulated exclusively by Innova Solutions and is sold, marketed and distributed from the company head office in Lancashire.

If you would like further information on this product, or have any other adhesive or tape applications, please don't hesitate to contact us for a free of charge consultation.
